01

What Is Word Cue

Word Cue is a native Mac app that listens to the pulpit mic through your soundboard, recognizes scripture as it's preached, and lets the booth operator put it on screen in your presentation app with one key.

It works beside the software your church already runs (ProPresenter, OpenLP, FreeShow, EasyWorship and others), on the same Mac. Everything happens on that Mac: no internet, no cloud, no recordings.

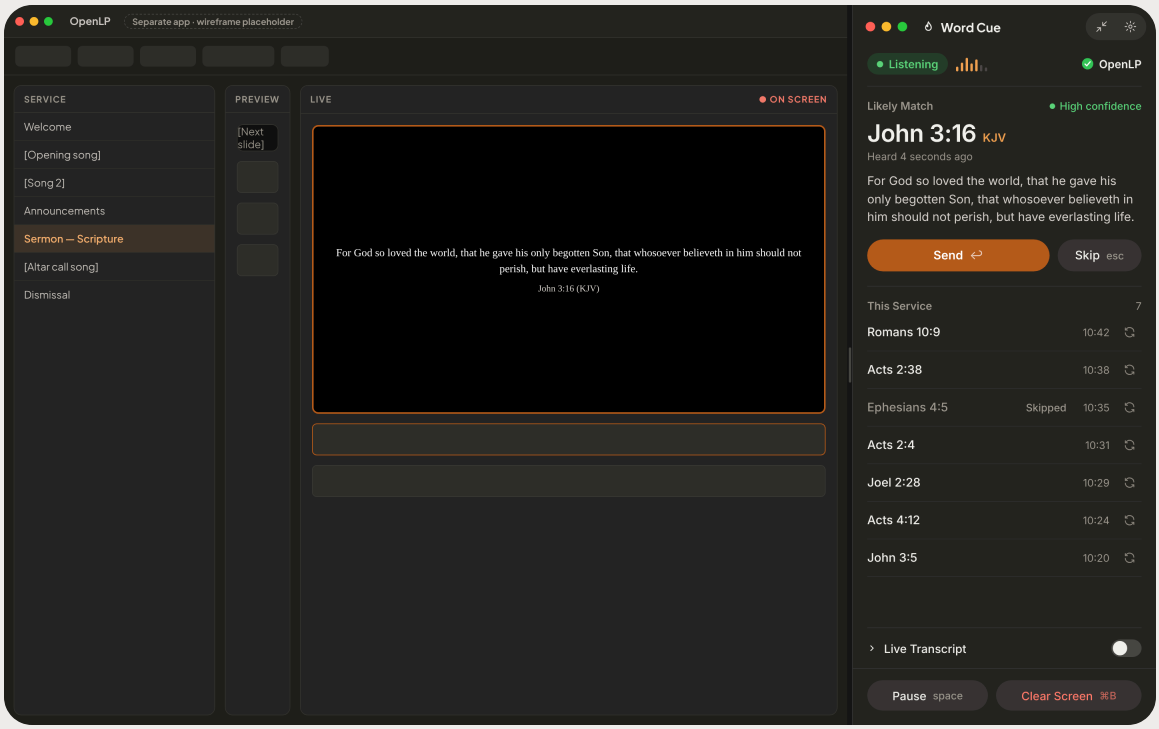

Figure 1 — *Word Cue runs as a fixed-width sidebar on the right edge of the operator's screen, beside the presentation app. Shown here with OpenLP; ProPresenter, FreeShow and EasyWorship sit in the same place.*

TWO WAYS SCRIPTURE GETS ON SCREEN

- **Live detection.** Each verse the preacher reaches appears as a Likely Match, ready to Send or Skip.
- **From files.** Drop the sermon notes on Word Cue and every reference goes into your presentation app, in order.

WHY In a live, Spirit-led service the preacher moves fast. Finding a verse by hand takes an operator 4 to 5 seconds. Word Cue has it waiting before they could have typed it.

What Word Cue is, and is not

WORD CUE IS	WORD CUE IS NOT
A companion that runs beside your presentation app on the same Mac	A presentation app. Songs, media and slides stay where they are
Listening to the soundboard feed and transcribing on-device	A scripture search tool. Operators search in their presentation app
Suggesting verses that the operator sends or skips	A multi-computer or network system
Private: no cloud, no audio saved	Something that changes the screen on its own by default

Five principles

1. **Reviewed by default.** Nothing reaches the screen without the operator, unless a church turns on Auto-send.
2. **Private and on-device.** Audio is never recorded or uploaded. Everything runs on the booth Mac.
3. **Apple structure, Fresh Fire identity.** Native macOS layout, controls and type, with Fresh Fire color and wordmark on top.
4. **Stay out of the way.** The presentation app carries the service. Word Cue is a quiet sidebar that never grows into it.
5. **One home per setting.** Every setting lives in exactly one place.

02

Works With Your Presentation App

Word Cue isn't tied to one program. It sends verses to whatever presentation software your church already uses, running on the same Mac.

ProPresenter
API
Official network API, ProPresenter 7.9 or later

OpenLP
API
OpenLP's Remote API on this Mac

FreeShow
API
FreeShow's built-in remote connection

EasyWorship
KEYBOARD
Keyboard automation

Other apps
KEYBOARD
Keyboard fallback for anything that finds verses from typed text

Setting up each app

APP	TURN THIS ON IN THE APP	THEN IN WORD CUE
ProPresenter	Network control in ProPresenter's Network settings; note the port	Pick ProPresenter. The port is filled in when Word Cue finds it
OpenLP	Remote, in OpenLP's settings	Pick OpenLP. Connects on port 4316 automatically
FreeShow	The remote connection, in FreeShow's settings	Pick FreeShow. Connects automatically
EasyWorship	Nothing in EasyWorship	Pick EasyWorship and allow Accessibility when macOS asks
Other apps	Nothing in the app	Pick Other and allow Accessibility; Word Cue types the reference for you

How the connection works

Connection method is set to **Automatic** by default: Word Cue talks to the app's API when it has one, which also confirms the verse went live. If the API isn't available, it falls back to keyboard shortcuts on its own, so the service keeps going. Each app is a separate adapter inside Word Cue, so new apps can be added in future updates without changing anything else.

NOTE The screenshots in this guide show a mix of apps (ProPresenter, OpenLP, FreeShow and EasyWorship). Every screen works the same whichever app you pick in **Settings › Verse Output**.

03

First-Run Setup

Setup runs once and takes about five minutes. A five-step window walks the operator through it; the dots at the bottom show progress.

1 · Welcome	2 · Allow access	3 · Audio	4 · Connect	5 · Done
What Word Cue does	Microphone and Speech	Interface and channel	Your presentation app	Summary and startup

Step 1 — Welcome

Explains the three things Word Cue does: hears the sermon from the soundboard, finds the verses in real time, and waits for the operator to send them.

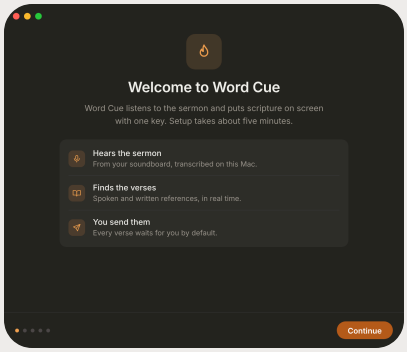

Figure 2 — *Welcome screen.*

Step 2 — Allow access

Word Cue asks macOS for two permissions: **Microphone**, to receive audio from the soundboard's USB interface, and **Speech Recognition**, to transcribe the sermon on this Mac. Accessibility is asked for later, and only if your setup needs it.

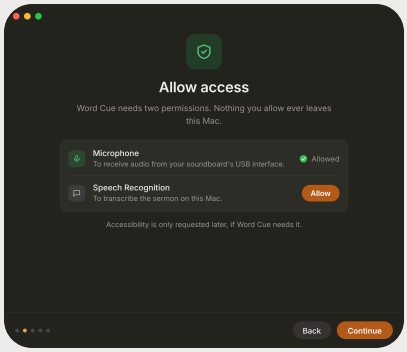

Figure 3 — *Permissions. Nothing allowed here ever leaves the Mac.*

Step 3 — Choose your audio

Pick the audio interface carrying the soundboard feed and the channel carrying the pulpit mic, then say a few words into it. The level meter shows a check mark when speech is detected.

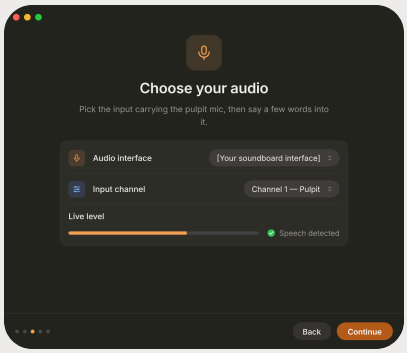

Figure 4 — *Audio interface and channel, with a live level check.*

BEST PRACTICE Feed the pastor's mic channel from the board into a USB audio interface instead of using a room mic. A direct board feed removes echo, congregation noise and music bleed, so transcription is far more accurate.

Step 4 — Connect your presentation app

Pick your app from the list (ProPresenter, OpenLP, FreeShow, EasyWorship or Other) and follow the one-line setup shown for it; section 02 lists them all. Word Cue connects automatically and shows which method it's using. **Test** sends a signal without changing what's on screen.

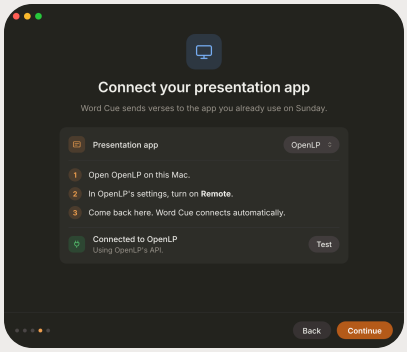

Figure 5 — *Connecting, shown with OpenLP. The steps on this screen change to match the app you pick.*

Step 5 — You're all set

A summary confirms audio, speech recognition and the presentation app are ready. Two switches are on by default: **Launch Word Cue at login** and **Show Word Cue when your presentation app opens**. From then on Word Cue appears beside it automatically.

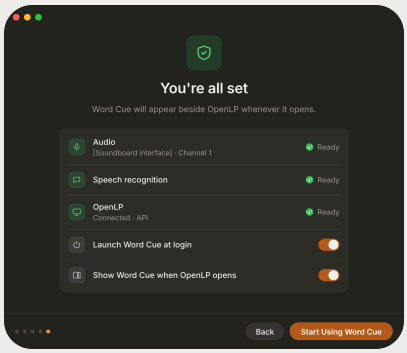

Figure 6 — *Setup summary.*

04

The Service View

The Service View is where the operator works during a service. It comes in two sizes: a full sidebar (the default) and a compact floating panel. Switch with the title-bar button or ⌘\.

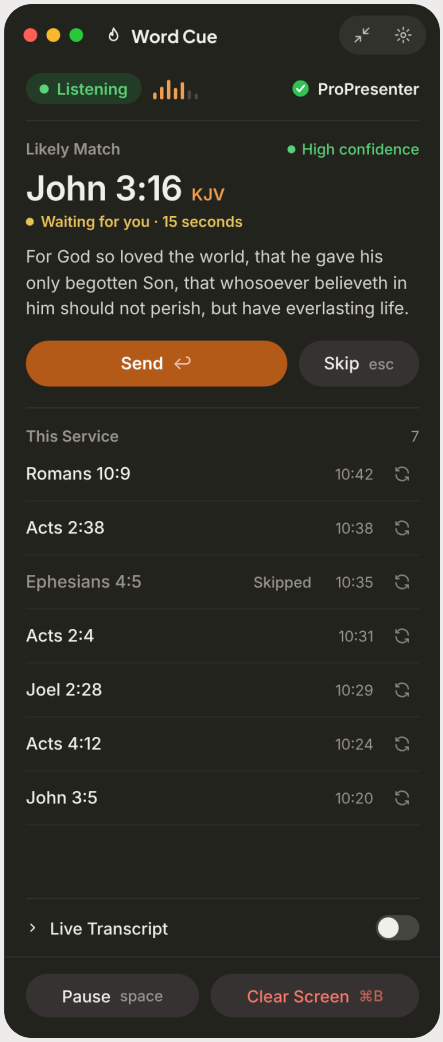

Figure 7 — *The full sidebar with a verse waiting, shown with ProPresenter.*

A fixed-width sidebar, about 380 px, pinned to the right edge of the operator's screen at full height. It never appears on the projector display and can't be dragged wider, so it never grows into the presentation app.

AREA	WHAT IT SHOWS
Title bar	Wordmark, compact-mode button, Settings
Status row	Listening, Ready, Paused or No audio; the mic level; your app's connection (green check or red ×)
Problem banner	Only when something is wrong, with a one-click fix
Likely Match	The reference in large type, translation, confidence, how long ago it was heard, and the verse
Send / Skip	Send ↩ puts it on screen. Skip esc clears it
This Service	Every verse handled, newest first, with time, Skipped or Auto-sent tags, and Resend
Live Transcript	Off by default; turn on to see the rolling transcript
Footer	Pause or Start Listening space and Clear Screen ⌘B

TIP Press ↩ to send and esc to skip while Word Cue is in front. While your presentation app is in front, add ⌃⌥ (for example ⌃⌥↩) so typing in that app is never affected.

Compact panel

A small floating panel that stays above other windows, for operators who want the presentation app full screen with a minimal cue on top. It shows status, the reference with confidence, the first line of the verse, and Send, Skip and Clear Screen. Its corner, opacity and stay-on-top behavior are set in Appearance.

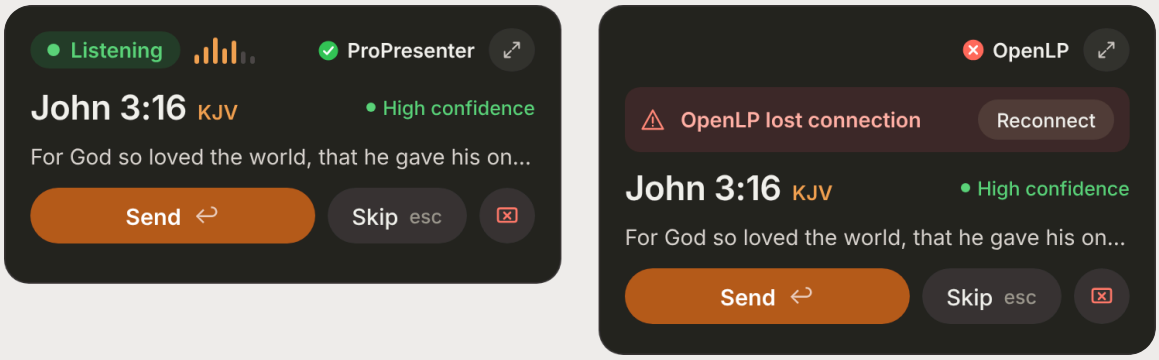

Figure 8 — *The compact panel: normal with ProPresenter (left), and with OpenLP disconnected (right).*

How the windows behave

1 · Mac starts
Word Cue opens at login and waits in the menu bar

2 · App opens
The sidebar appears beside your presentation app

3 · Listen
One click, or automatic, per Start listening

4 · Verse heard
It appears as a Likely Match: Send or Skip

5 · Switching
Both apps come forward and go back together

6 · App quits
Word Cue hides, or quits if you prefer

05

Service View States

The sidebar always says what Word Cue is doing. Each status color has one job: green is healthy, yellow means a verse is waiting, red means a problem.

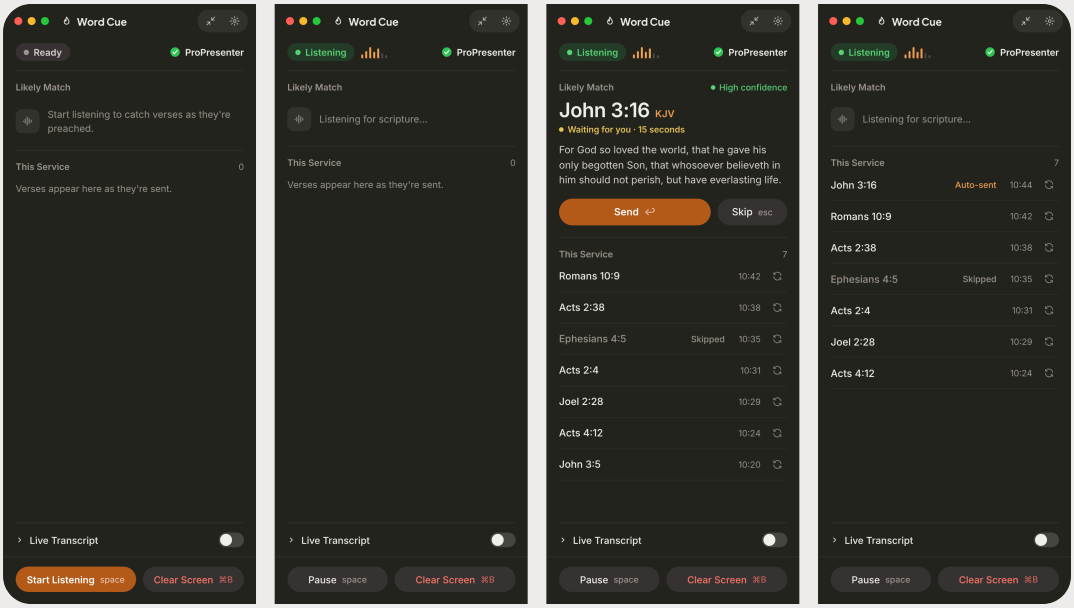

Figure 9 — *Normal states, shown with ProPresenter. Left to right: Ready, listening with no verses yet, verse waiting, auto-sent verse.*

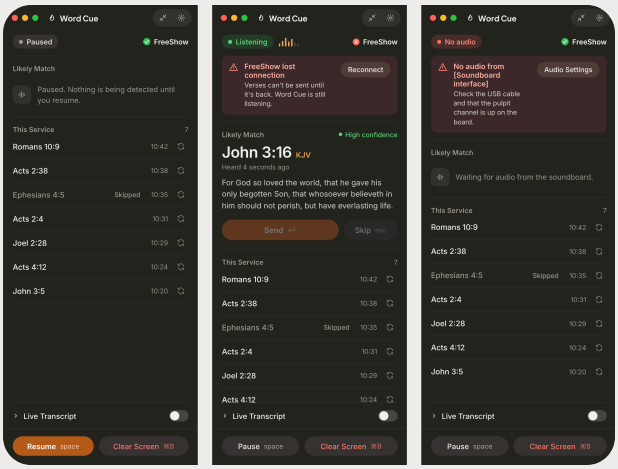

Figure 10 — *Paused and problem states, shown with FreeShow. Left to right: Paused, presentation app lost connection, no audio.*

STATE	STATUS	LIKELY MATCH AREA	FOOTER
Ready	Gray “Ready”	“Start listening to catch verses as they’re preached.”	Start Listening
Listening, no verses yet	Green + mic meter	“Listening for scripture…”	Pause
Likely Match	Green	Reference, verse, “Heard 4 seconds ago”	Pause
Verse waiting	Green	Yellow “Waiting for you · 15 seconds”	Pause
Auto-sent	Green	Back to listening; history shows Auto-sent	Pause
Paused	Gray “Paused”	“Nothing is being detected until you resume.”	Resume
App lost connection	Green; red × by the app	Red banner with Reconnect; Send and Skip dimmed	Pause
No audio	Red “No audio”	Red banner with Audio Settings	Pause

When the presentation app drops, Word Cue keeps listening so nothing is missed. Detected verses stay in the history and can be resent once it’s back.

06

Adding Verses From Files

Drag the pastor's sermon notes onto the sidebar and Word Cue loads every reference into your presentation app, in the order they appear. It works before or during the service and doesn't need the microphone.

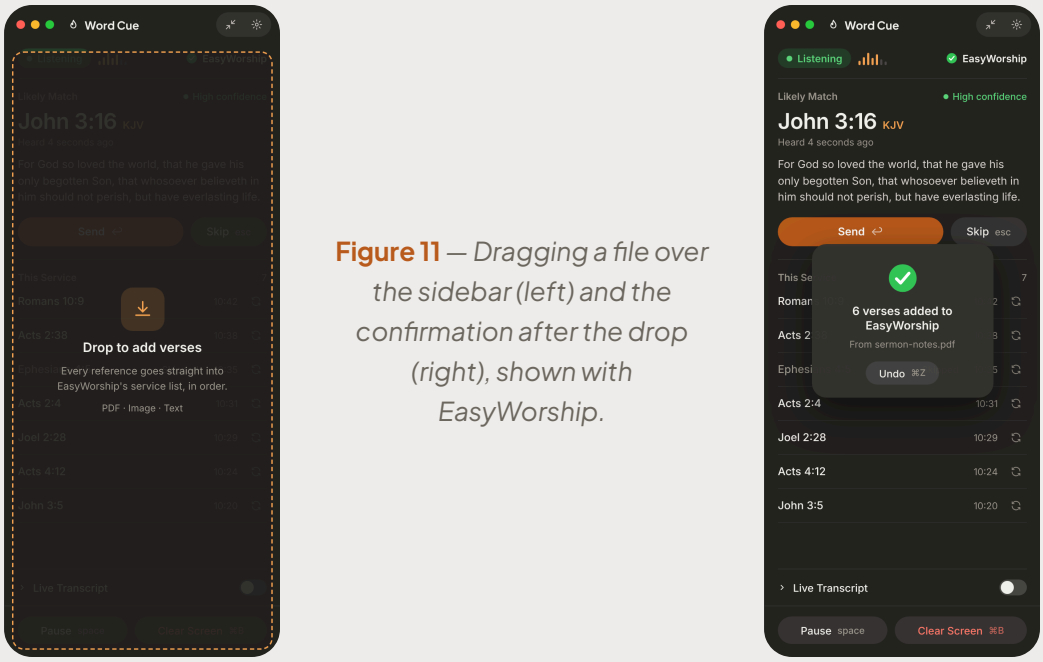

Figure 11 — *Dragging a file over the sidebar (left) and the confirmation after the drop (right), shown with EasyWorship.*

HOW IT WORKS

1. Drag a PDF, image or text file over the sidebar. An orange drop zone appears.
2. Drop it. Word Cue reads the file (images through on-device text recognition) and pulls out every reference.
3. The references are added to your app's service list or playlist, in order, with a confirmation such as "6 verses added."
4. Changed your mind? Press Undo ⌘Z.

FEATURE	DETAIL
Formats	PDF, image, plain text
Order	Same order as the file
Undo	⌘Z from the confirmation
Needs audio?	No

WHY With the planned scriptures already loaded, live detection becomes the safety net for what wasn't planned, not the thing the service depends on.

07

How Detection Works

Every verse goes through the same six stages, all on the booth Mac. A person approves it before it reaches the screen, unless the church turns on Auto-send.

Listen	Understand	Check	Filter	Suggest	Send
Soundboard audio becomes text on-device	Apple's on-device model spots the reference	Cleaned up and verified against the KJV	Low confidence, repeats and false matches dropped	Likely Match with confidence	On approval, to your presentation app

1. **Listen.** AVAudioEngine reads the chosen interface and channel. Apple's on-device Speech framework turns the sermon into text in real time; Enhanced uses Apple Intelligence where available.
2. **Understand.** Apple's on-device Foundation Model reads the transcript and decides whether a reference just happened, and which one. It handles "turn to Romans 8," "First John," and quoted verse text.
3. **Check.** "first john four eight" becomes 1 John 4:8. The book and chapter are confirmed to exist, known mishearings of KJV names are fixed, and quoted text is looked up in the bundled KJV.
4. **Filter.** Anything under the minimum confidence (70%) is dropped. Common-word book names need a chapter number, and the same verse won't repeat within 60 seconds.
5. **Suggest.** The verse appears as the Likely Match. In Review first mode it waits for Send; in Auto-send mode, verses at or above 95% go straight to the screen.
6. **Send.** Word Cue tells your presentation app to show the verse, through its API where it has one or with keyboard automation where it doesn't.

What Word Cue recognizes

PATTERN	EXAMPLE
Written-style references	"John 3:16"
Spoken references	"John chapter three, verse sixteen"
Verse ranges	"verses sixteen through eighteen"
Follow-up verses	"…and verse seventeen" (uses the last chapter mentioned)

PATTERN	EXAMPLE
Book name variations	“First John,” “1st John,” “Song of Songs”
Quoted scripture (Beta)	Spoken verse text matched to the Bible when no reference is said

Avoiding false matches

Mark, Job, Acts, Numbers, Judges, Revelation and Lamentations are also everyday words. Word Cue only treats them as books when a chapter number follows, so “mark my words” or “acts of kindness” never trigger a verse. **Pause detection during music** keeps worship lyrics that quote scripture from triggering.

BEST PRACTICE

Before the first Sunday, use **Run a Practice Session** (Settings › General) with a recorded sermon. It shows exactly what Word Cue catches and lets you tune confidence without a live service.

08

Settings Reference

Every Settings panel exactly as the operator sees it, sidebar and all, followed by what each setting does and how it ships. Most are set once during setup and never touched again.

SETTINGS › OVERVIEW

Finding your way around

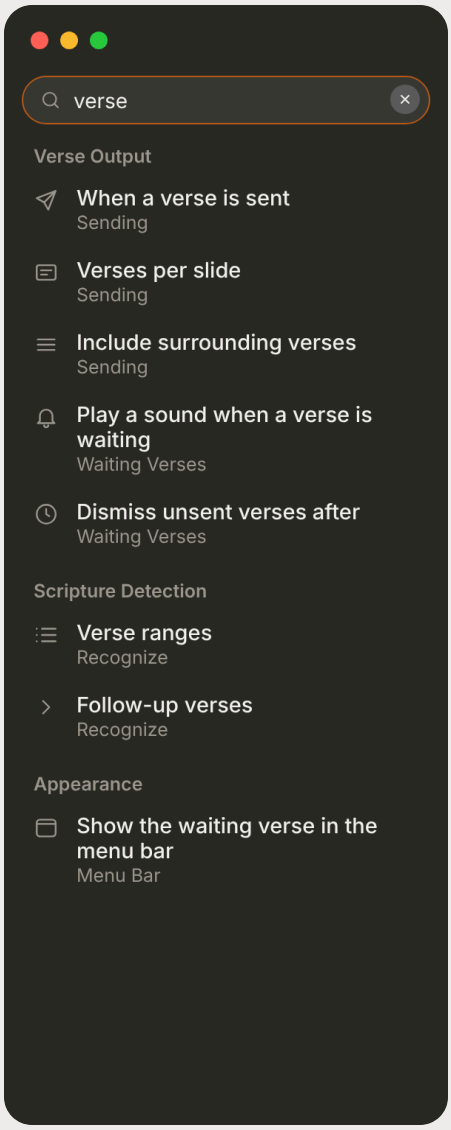

Figure 12 — *Searching settings by name.*

The Settings window has a sidebar on the left with every panel, and the selected panel on the right. Panels are grouped by what they're for:

GROUP	PANELS
Home	General
Service	Audio Input, Scripture Detection, Verse Output
Customization	Appearance, Shortcuts & Controls, Filters
System	Advanced, Support

Type in **Search settings** at the top of the sidebar to find any setting by name. Each result shows the setting and the section it lives in; click it to jump there.

TIP Open Settings from the gear in the Service View title bar, or from the menu bar icon.

SETTINGS › HOME

General

The home panel: Word Cue's status with a Start Listening button, Cue mode, startup behavior and quick links.

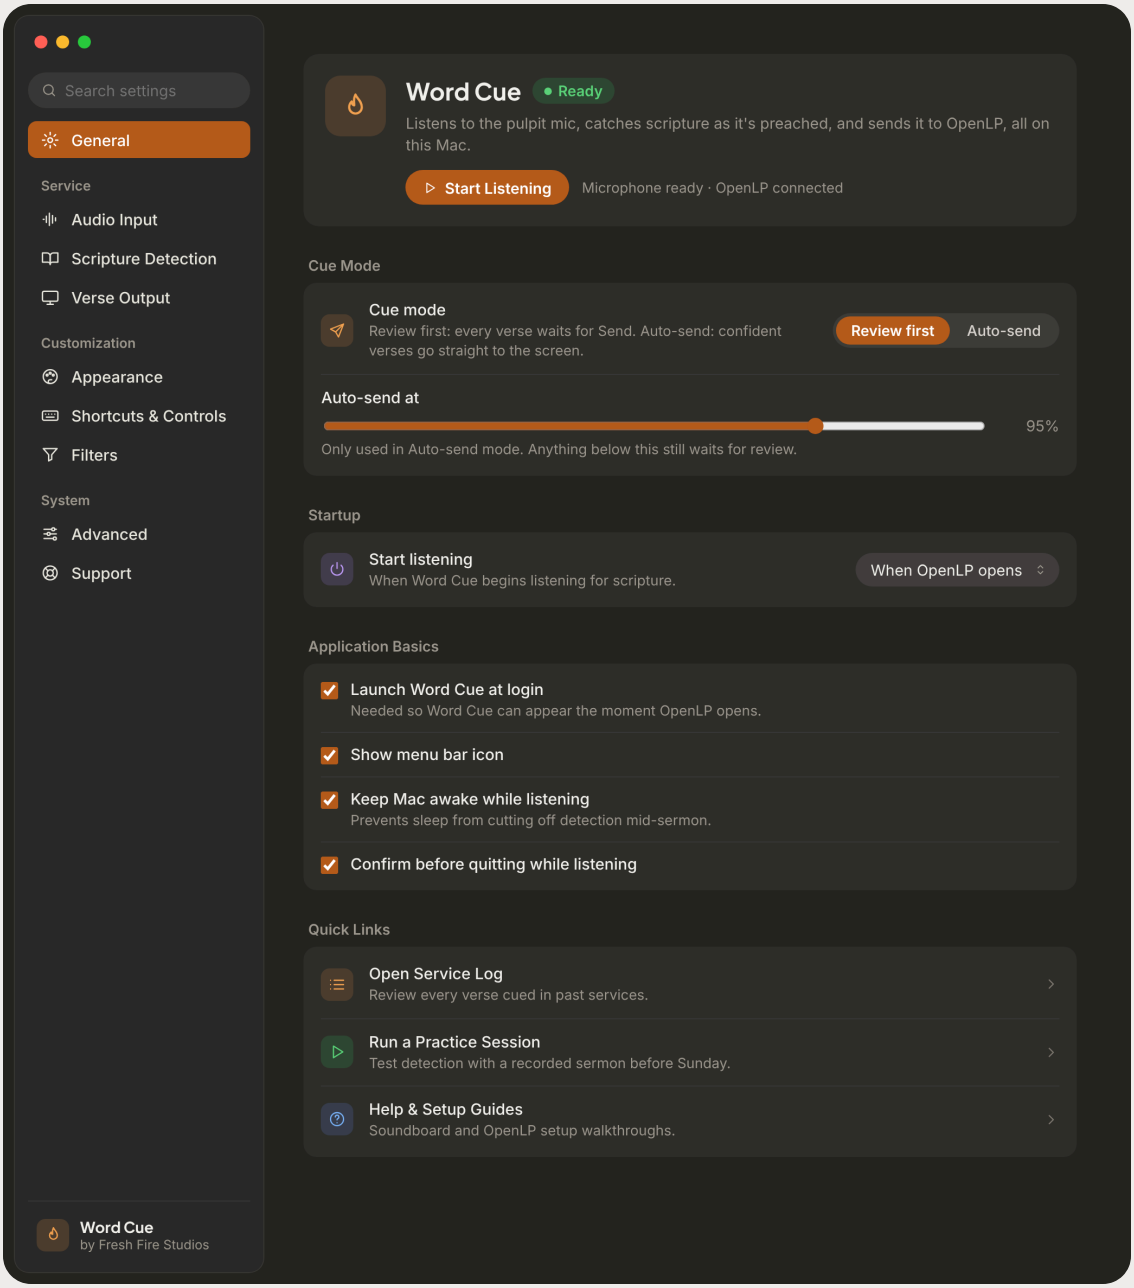

Figure 13 — *General, shown with OpenLP.*

How to use it

SETTING	WHAT IT DOES	DEFAULT
Cue mode	**Review first:** every verse waits for Send. **Auto-send:** confident verses go straight to the screen	Review first
Auto-send at	The confidence (80–100%) a verse needs to send itself. Anything below still waits	95%
Start listening	When your presentation app opens, or manually	When app opens
Launch at login	Needed so Word Cue can appear the moment your presentation app opens	On
Show menu bar icon	Keeps Word Cue in the menu bar	On
Keep Mac awake	Stops sleep from cutting off detection mid-sermon	On
Confirm before quitting	Asks first if you quit while listening	On
Quick links	Open Service Log, Run a Practice Session, Help & Setup Guides	—

SETTINGS › SERVICE

Audio Input

Where the sermon comes from and how it's transcribed. The meter at the top shows the input, its level and whether speech is detected.

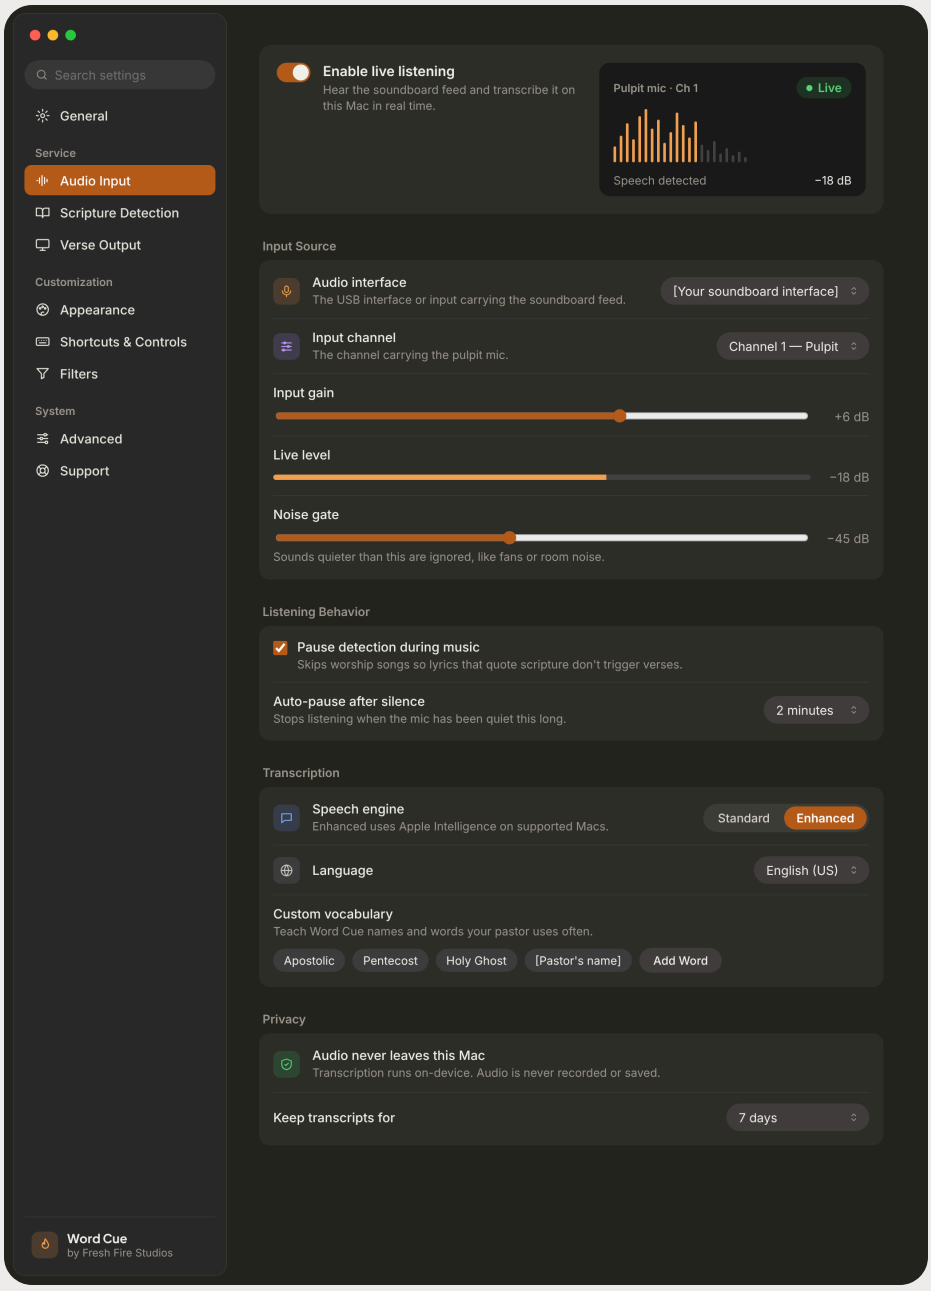

Figure 14 — *Audio Input.*

How to use it

SETTING	WHAT IT DOES	DEFAULT
Enable live listening	Turns transcription of the soundboard feed on or off	On
Audio interface	The USB interface or input carrying the soundboard feed	Set at setup
Input channel	The channel with the pulpit mic, or a stereo mix	Channel 1
Input gain	Boosts a quiet feed; watch the live level	+6 dB
Noise gate	Ignores sounds quieter than this, like fans or room noise	−45 dB
Pause during music	Skips worship songs so lyrics don't trigger verses	On
Auto-pause after silence	Stops listening after 2, 5 or 10 minutes of quiet, or never	2 minutes
Speech engine	Standard, or Enhanced with Apple Intelligence	Enhanced
Language	English (US) or Spanish	English (US)
Custom vocabulary	Words your pastor uses often: Apostolic, Pentecost, Holy Ghost, names	—
Keep transcripts for	This service only, 7 days, 30 days, or don't keep. Audio is never saved	7 days

SETTINGS › SERVICE

Scripture Detection

Which Bible to use, which kinds of references to catch, and how sure Word Cue must be. The preview shows a sample sentence becoming a Likely Match.

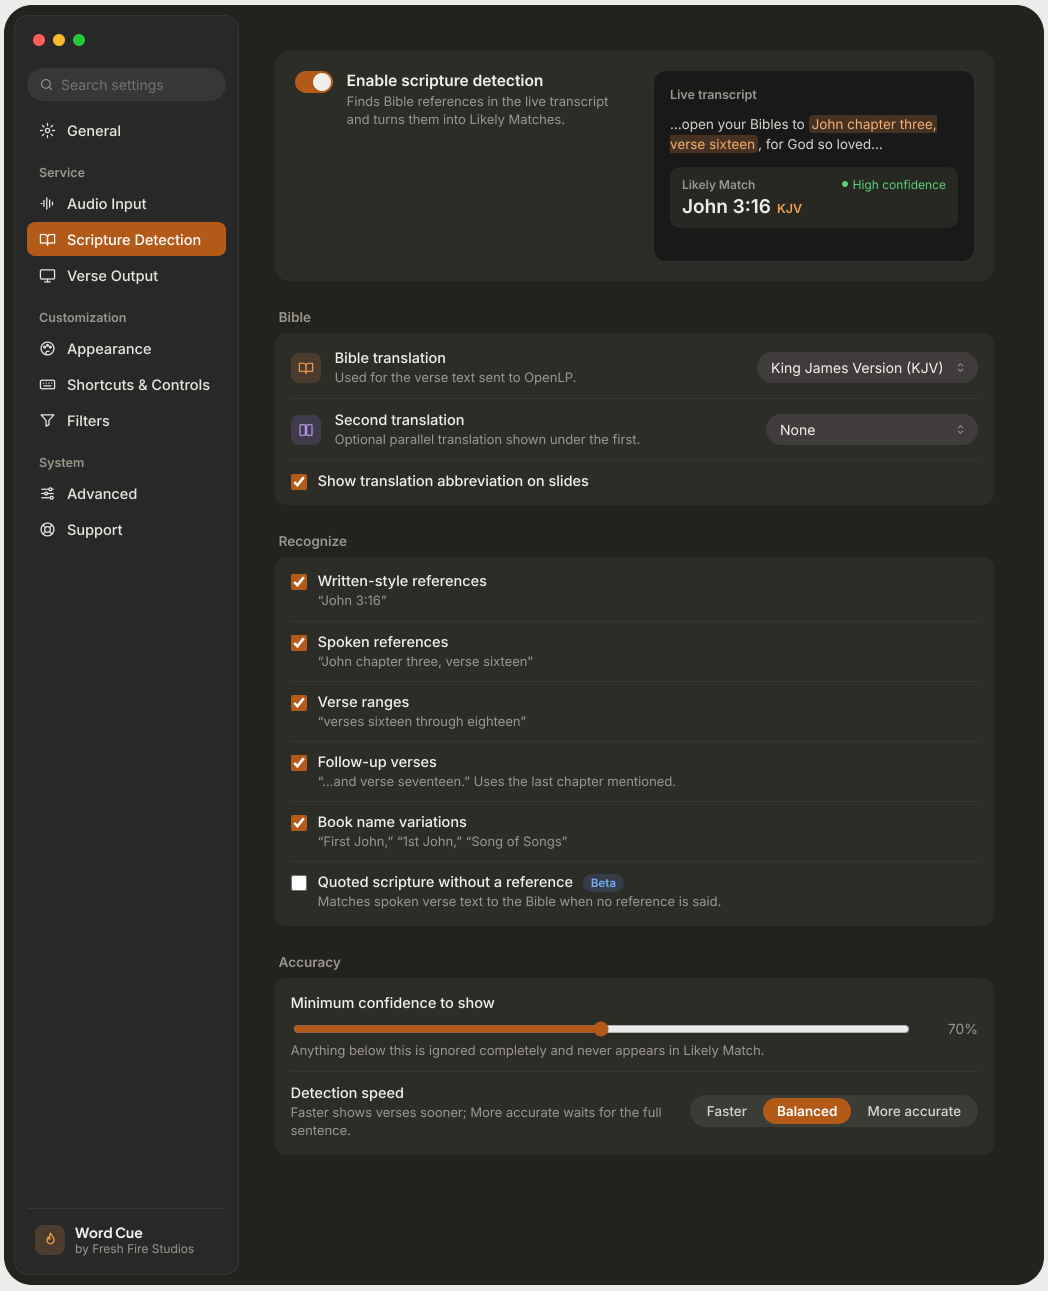

Figure 15 — *Scripture Detection.*

How to use it

SETTING	WHAT IT DOES	DEFAULT
Enable detection	Turns the transcript into Likely Matches	On
Bible translation	Translation for the verse text: KJV, NKJV or ESV	KJV
Second translation	Optional parallel translation shown under the first	None
Show abbreviation	Adds “KJV” to the slide	On
Recognize	Each pattern from section 07 can be switched on or off	All but Beta
Minimum confidence	Anything below is never shown	70%
Detection speed	Faster shows verses sooner; More accurate waits for the full sentence	Balanced

SETTINGS › SERVICE

Verse Output

Which presentation app Word Cue talks to, and how verses land on screen. Pick ProPresenter, OpenLP, FreeShow, EasyWorship or Other in **Presentation app**; everything else on the panel works the same for each.

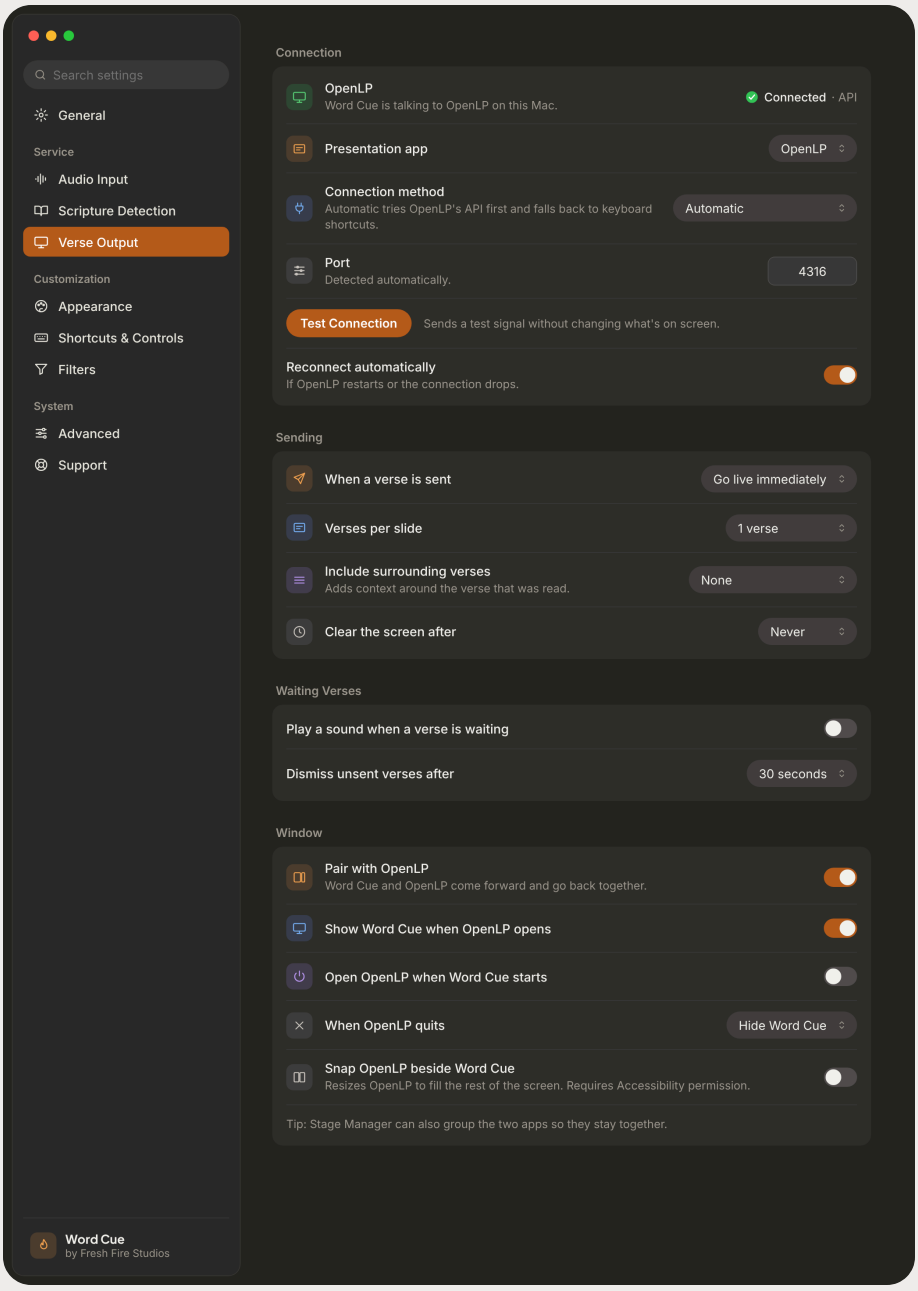

Figure 16 — *Verse Output, shown connected to OpenLP.*

How to use it

SETTING	WHAT IT DOES	DEFAULT
Presentation app	ProPresenter, OpenLP, FreeShow, EasyWorship or Other	Detected
Connection method	Automatic (API first, then keyboard), API only, or keyboard only	Automatic
Port	Found automatically for your app (OpenLP uses 4316)	Auto
Test Connection	Sends a test signal without changing the screen	—
Reconnect automatically	If the app restarts or the connection drops	On
When a verse is sent	Go live immediately, or add to the service list	Go live
Verses per slide	1 verse, 2 verses or the whole passage	1 verse
Surrounding verses	None, 1 before and after, or the rest of the paragraph	None
Clear the screen after	Never, or after 1, 2 or 5 minutes	Never
Sound when waiting	Plays a sound when a verse is waiting	Off
Dismiss unsent after	30 seconds, 1 minute or never	30 seconds
Pair with app	Word Cue and your app come forward and go back together	On
Show when app opens	Word Cue appears as soon as your app does	On
Open app with Word Cue	Starts your presentation app when Word Cue starts	Off
When the app quits	Hide Word Cue or quit it	Hide
Snap app beside Word Cue	Resizes your app to fill the rest of the screen; needs Accessibility	Off

TIP macOS Stage Manager can also group Word Cue and your presentation app so they stay together.

SETTINGS › CUSTOMIZATION

Appearance

Light or dark, accent color, the compact panel and the menu bar icon. The preview shows the compact panel as you change it.

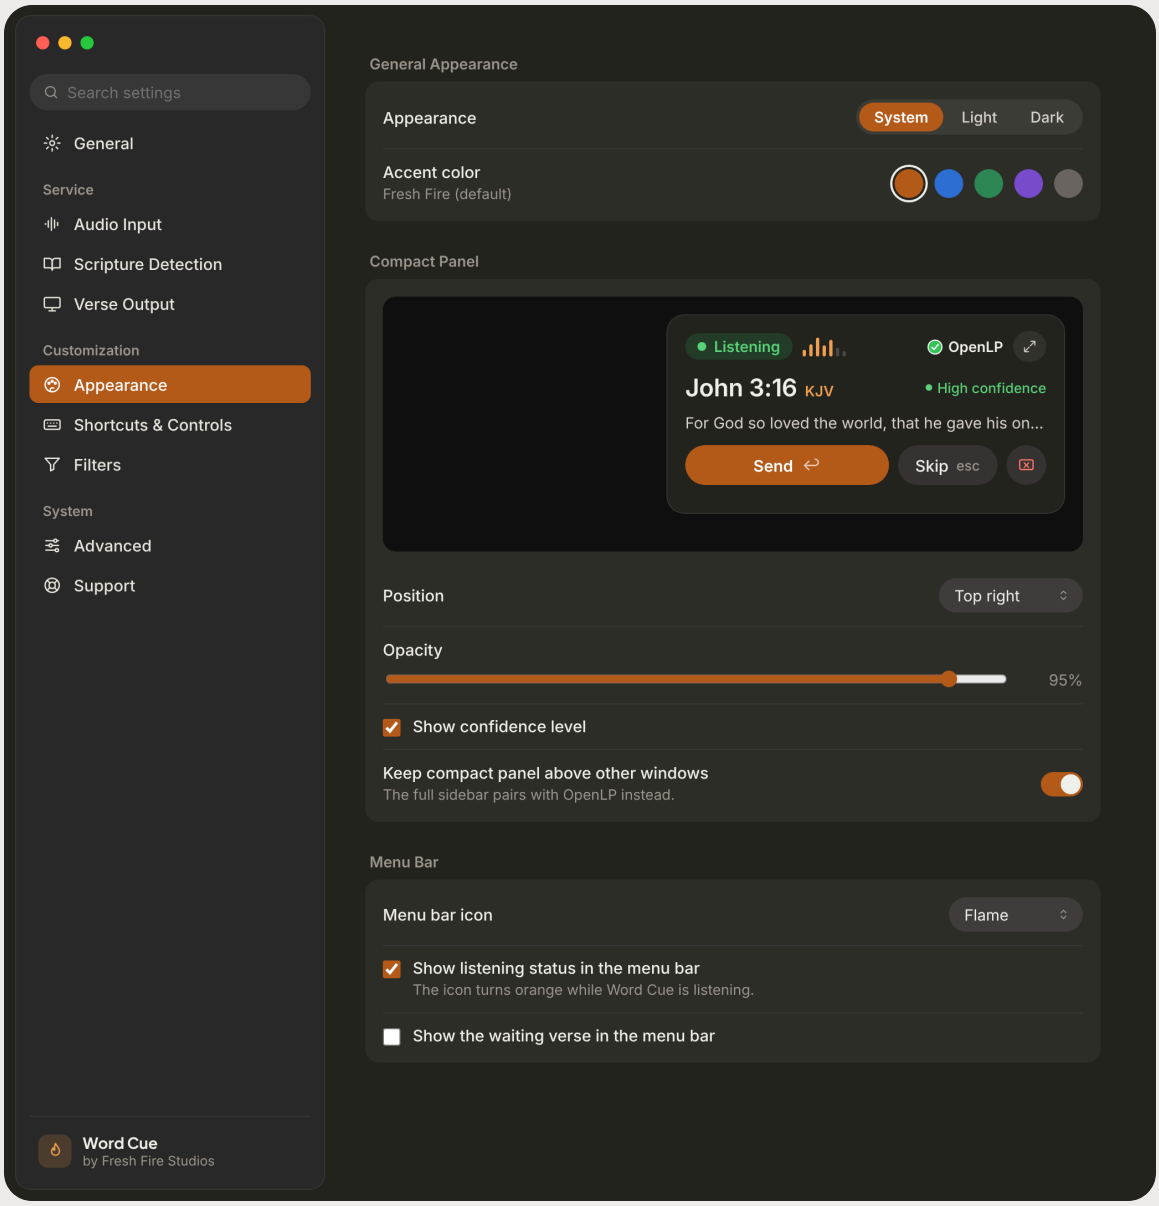

Figure 17 — *Appearance.*

How to use it

SETTING	WHAT IT DOES	DEFAULT
Appearance	System, Light or Dark	System
Accent color	Color for buttons and selection	Fresh Fire
Panel position	Which corner the compact panel sits in	Top right
Panel opacity	How see-through the compact panel is	95%
Show confidence	Confidence level on the compact panel	On
Keep panel on top	Compact panel stays above other windows	On
Menu bar icon	Flame, waveform or open book	Flame
Listening status	The icon turns orange while listening	On
Waiting verse in menu bar	Shows the waiting reference next to the icon	Off

SETTINGS › CUSTOMIZATION

Shortcuts & Controls

Every service action has two keys: a plain key that works while Word Cue is in front, and an “Anywhere” key with ⌃⌥ that works while your presentation app is in front, without interfering with typing there.

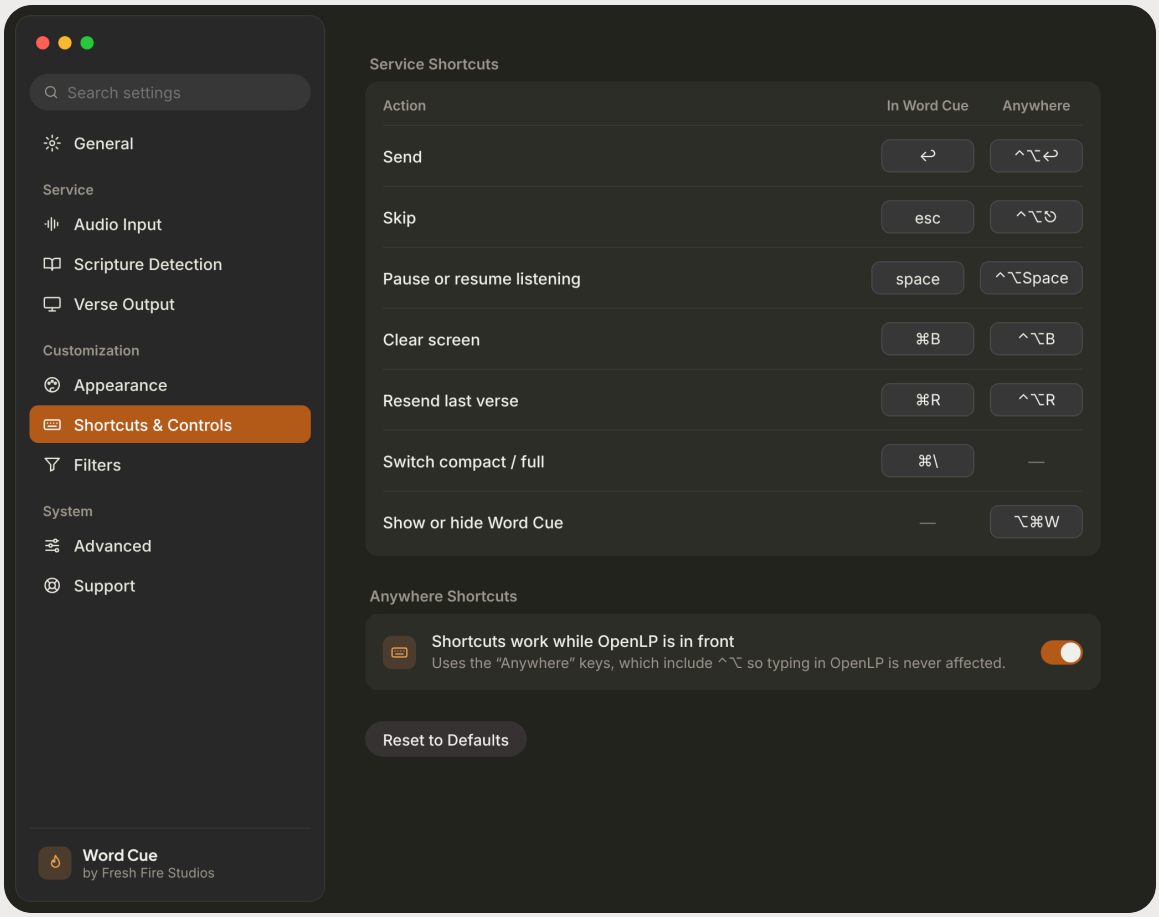

Figure 18 — *Shortcuts & Controls.*

How to use it

ACTION	IN WORD CUE	ANYWHERE
Send	↩	⌃⌥↩
Skip	esc	⌃⌥esc
Pause or resume listening	space	⌃⌥space

ACTION	IN WORD CUE	ANYWHERE
Clear screen	⌘B	⌃⌥B
Resend last verse	⌘R	⌃⌥R
Switch compact / full	⌘\	—
Show or hide Word Cue	—	⌥⌘W
Undo a file drop	⌘Z	—

Click any key to change it. **Reset to Defaults** restores them all, and **Shortcuts work while your app is in front** turns the Anywhere set on or off.

SETTINGS › CUSTOMIZATION

Filters

Stops everyday speech from turning into verses.

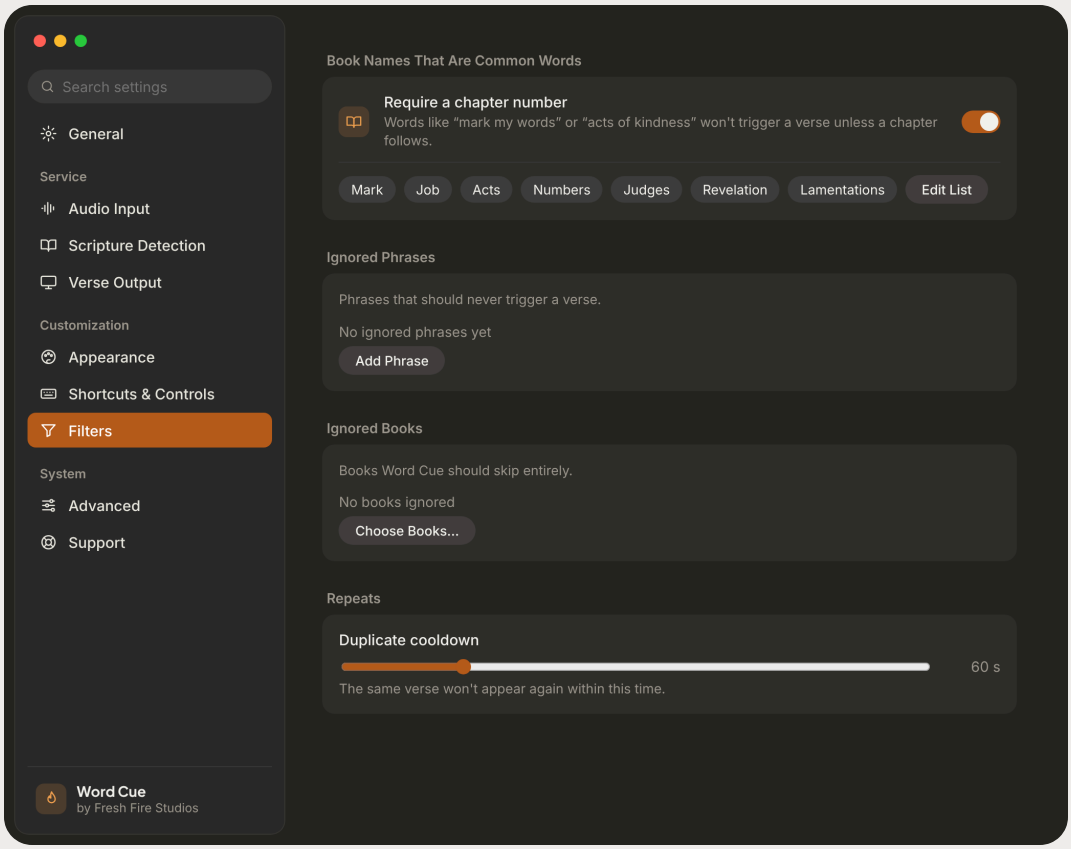

Figure 19 — *Filters.*

How to use it

SETTING	WHAT IT DOES	DEFAULT
Require a chapter number	Mark, Job, Acts, Numbers, Judges, Revelation and Lamentations only match when a chapter follows. The list is editable	On
Ignored phrases	Phrases that should never trigger a verse	None
Ignored books	Books Word Cue skips entirely	None
Duplicate cooldown	The same verse won't appear again within this time	60 s

SETTINGS › SYSTEM

Advanced

For troubleshooting and unusual setups. Most churches never open this panel.

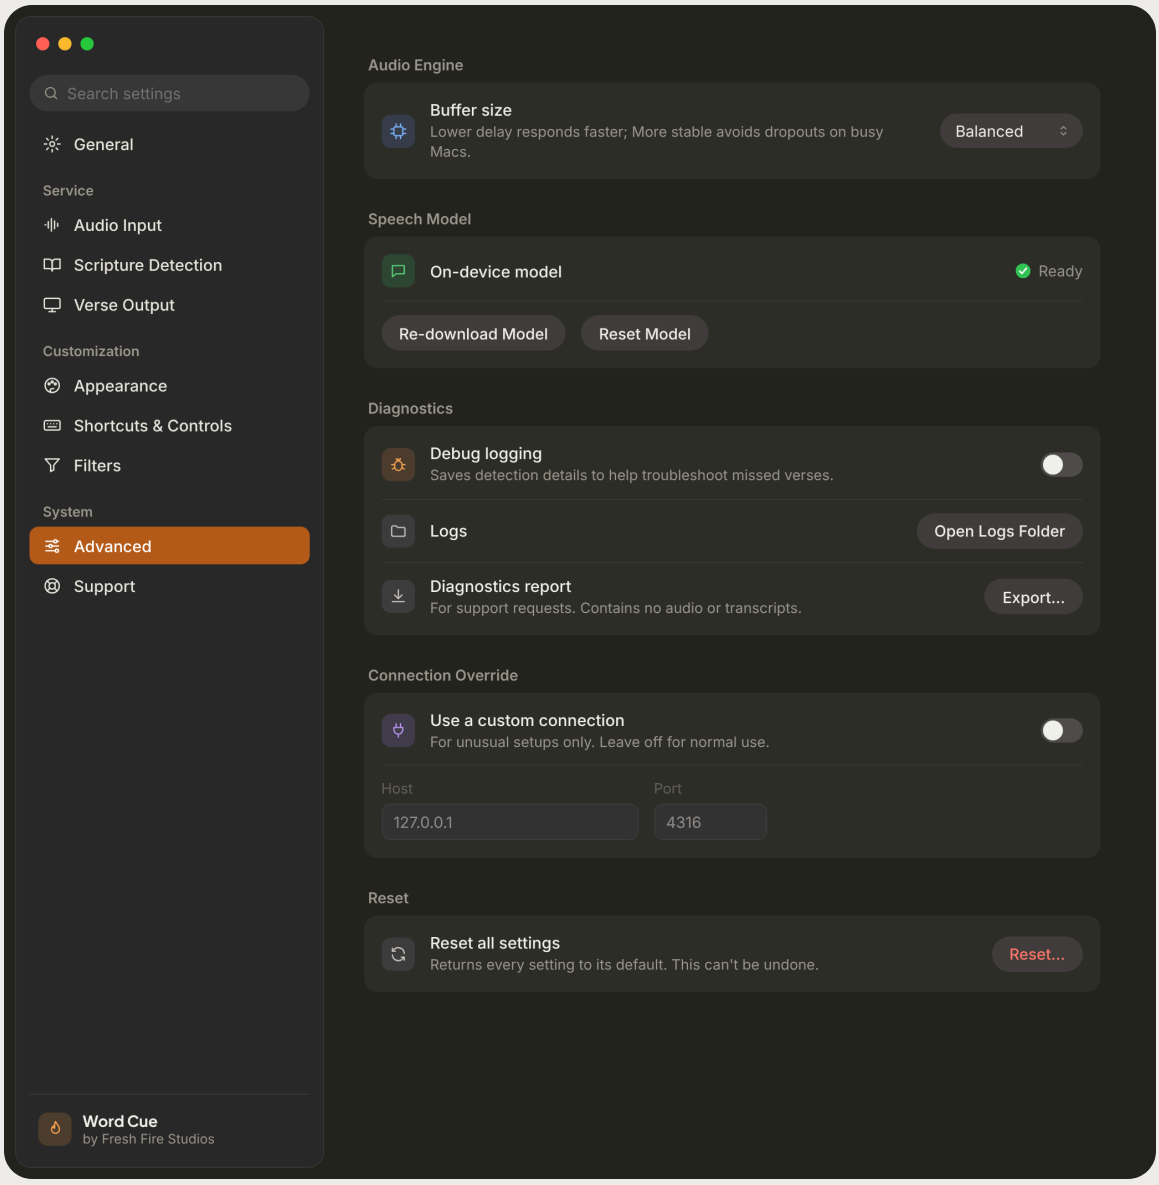

Figure 20 — *Advanced.*

How to use it

SETTING	WHAT IT DOES
Buffer size	Balanced, Lower delay (faster) or More stable (avoids dropouts on busy Macs)
On-device model	Shows the model's status; Re-download or Reset it
Debug logging	Saves detection details to troubleshoot missed verses; Open Logs Folder
Diagnostics report	Export for support. Never contains audio or transcripts
Connection override	Custom host and port, for unusual setups only
Reset all settings	Returns every setting to its default. Can't be undone

SETTINGS › SYSTEM

Support

Contact, permissions, feedback, updates and backup in one place.

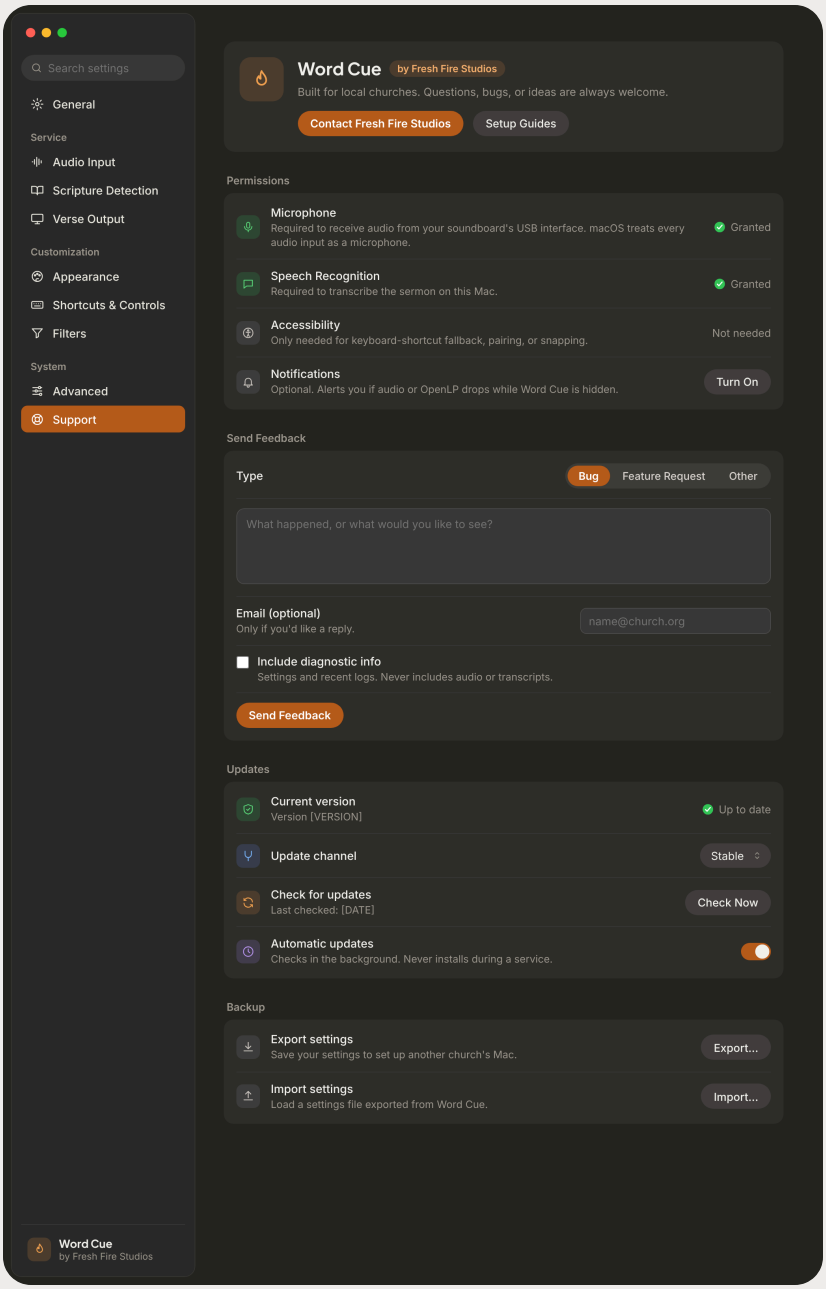

Figure 21 — *Support.*

How to use it

AREA	WHAT IT DOES
Permissions	Live status of Microphone, Speech Recognition, Accessibility and Notifications (section 10)
Send Feedback	Bug, Feature Request or Other, an optional email for a reply, and optional diagnostic info (settings and logs, never audio or transcripts)
Updates	Current version, Stable or Beta channel, Check Now; automatic updates never install during a service
Backup	Export settings to set up another church's Mac, or import a settings file

09

Troubleshooting

When something goes wrong mid-service, Word Cue shows a red banner with a one-click fix and keeps working on everything it still can.

PROBLEM	WHAT YOU SEE	WHAT TO DO
Presentation app lost connection	Red banner, red × by the app, Send dimmed. Still listening	Press Reconnect. If that fails, check the app is open and its remote/network setting is on (section 02), then Test Connection
No audio	Red “No audio” pill and banner	Check the USB cable and that the pulpit channel is up on the board
Verses aren’t caught	Listening, but no Likely Matches	Check the live level; add names to Custom vocabulary; lower Minimum confidence a little; turn on Debug logging
Wrong verses appear	Everyday phrases become verses	Add the phrase to Ignored phrases; keep Require a chapter number on; raise Minimum confidence
A verse keeps repeating	Repeats within a minute	Raise Duplicate cooldown in Filters
Audio drops out	Gaps in detection on a busy Mac	Set Buffer size to More stable in Advanced
Keys type into the app	A plain key reaches the presentation app	Use the ⌃⌥ Anywhere keys while that app is in front
Keyboard mode does nothing	EasyWorship or Other doesn’t respond	Allow Accessibility for Word Cue in System Settings › Privacy & Security

TIP Turn on Notifications in Settings › Support so you’re alerted if audio or the presentation app drops while Word Cue is hidden.

For anything else, send a report from **Settings › Support › Send Feedback** with “Include diagnostic info” checked. It sends settings and recent logs only, never audio or transcripts.

10

Privacy & Permissions

Audio never leaves the booth Mac. Transcription and detection run on-device, audio is never recorded, and Word Cue works with no internet connection at all.

WHY Missionaries and ministers sometimes share sensitive things from the pulpit. Word Cue is built so none of it can leave the building. It uses Apple's on-device models only, and **never AI models from unverified or untrusted sources**.

Permissions

PERMISSION	WHEN ASKED	WHY
Microphone	Always, at setup	Receive audio from the soundboard's USB interface. macOS treats every audio input as a microphone
Speech Recognition	Always, at setup	Transcribe the sermon on this Mac
Accessibility	Only if needed	Keyboard automation (EasyWorship, Other), pairing without stealing focus, snapping windows
Notifications	Optional	Alerts if audio or the presentation app drops while Word Cue is hidden

What is kept, and for how long

DATA	KEPT	WHERE
Audio	Never	Not recorded
Transcripts	7 days by default (this service only, 30 days, or don't keep)	This Mac
Service history	Verses cued in past services	This Mac
Settings	Until changed; exportable as a file	This Mac
Diagnostics	Only when you export or send them	Sent only by you

11

Technical Specifications

FEATURE	DETAIL
Platform	macOS 27 or later. Native SwiftUI, Mac only
Hardware	Apple silicon required. RAM and storage minimums will be set by what the app needs and published before release
Presentation apps	ProPresenter 7.9+ (API), OpenLP (Remote API), FreeShow (remote connection), EasyWorship (keyboard), and others through the keyboard fallback. Runs on the same Mac
Audio input	Any USB or Thunderbolt interface macOS recognizes, with channel selection
Speech engine	Apple's on-device Speech framework; Enhanced on Apple Intelligence Macs. Fully offline
Detection	Apple's on-device Foundation Model plus a reference parser, confidence scoring, filters and cooldown
Bible text	KJV bundled (public domain) and the default
Interface	Native macOS controls; SF Pro for interface text, Plus Jakarta Sans for the wordmark
Updates	Sparkle, cryptographically signed. Never installs during a service
Settings	Stored locally; export and import as a file
Internet required	Never during services

12

Pricing & Distribution

PRICE

Free. No purchase, no subscription, no per-seat cost. An optional donation supports development.

Word Cue is Free & Source-Available and distributed directly from the Fresh Fire Studios website as a signed, Apple-notarized Mac app, so macOS installs it without security warnings. It isn't on the Mac App Store: the App Store sandbox conflicts with soundboard audio capture, local network access and keyboard automation, which Word Cue needs.

FEATURE	DETAIL
Price	Free, with an optional donation
License	Free & Source-Available: free to use, code public to read, all rights reserved
Distribution	Direct download from the Fresh Fire Studios website, notarized through Apple's Developer ID program
Updates	Free and automatic through Sparkle; Stable or Beta channel
Seats	Install on as many church Macs as needed; export settings to copy a setup

WHY

The goal is missional, not financial: any church can use Word Cue freely, and the code is public so anyone can see exactly how it works.

13

Roadmap & Open Questions

Planned

ITEM	WHAT IT ADDS
iPhone and iPad companion	Scan a printed bulletin or handwritten outline, import a PDF, or dictate a verse list and send it to the Mac over the local network. Also lets someone advance or reject verses from their phone
Service Log export	A full record of every verse in a service, exportable for the pastor and congregation
More presentation apps	New adapters added in updates as churches ask for them

Open questions

- How to show non-KJV verse text, since most modern translations are licensed
- The exact API calls each presentation app needs to send a verse live
- Whether pairing with the presentation app causes visible flicker when switching apps
- Whether the newest Apple speech API still needs the Speech Recognition permission
- Whether the on-device model handles difficult passages without refusing
- Honest minimum hardware, published before release

Out of scope

Songs, media, slides and song licensing · Scripture search inside Word Cue · Service profiles · Cloud accounts or syncing · Running across two computers or a network.

Word Cue

“Scripture on screen the moment it’s preached.”

QUICK REFERENCE · DURING A SERVICE

↩	Send the verse	esc	Skip it	space	Pause / resume
⌘B	Clear screen	⌘R	Resend last	⌘\	Compact / full

Presentation app in front? Add ⌃⌥ to any of these.
